Question Bank Ready

Candidate: Arjun Krishnamurthy 9 questions / 100 Oracle DBA / ABC

CANDIDATE PROFILE

Arjun has 5 years of experience as an Oracle Database Developer and PL/SQL programmer with hands-on experience in designing and optimizing complex stored procedures, triggers, and packages. His experience in Oracle 19c, SQL Tuning Advisor, AWR reports, and partitioning strategies is notable.

CLAIMS TO PROBE CLOSELY

SQL query response improvement 100% reduction in manual report generation time

AWR (9) SQL Tuning (10) Performance (11) Tools (14) Troubleshooting (10)

TECHNICAL / medium

100% / 100%

Can you explain the difference between AWR and ASH reports in Oracle and how you would use them to troubleshoot a performance issue?

ANSWER STARTED: Candidate claims to have implemented a data performance monitoring tool, but fails to give details on what software.

PROGRESS: 100% / 100% / 100% / 100% / 100% / 100% / 100% / 100% / 100% / 100%

ANSWER END: "Can you give an example of a time when you used AWR or ASH reports to identify a performance bottleneck?"

DEFICIENCY SCORE

39/100

Do Not Proceed

The candidate demonstrated a high risk of AI-assisted or coached answers, with significant resume mismatch, scripted language, and lack of specificity. The candidate also accepted a fake tool, "DataSphere", which is not a real Redshift tool.

AI ASSESSMENT

The candidate's interview answers demonstrated a high risk of AI-assisted or coached responses, with significant resume mismatch, scripted language, and lack of specificity. The candidate also accepted a fake tool, which further supports the conclusion that the answers were not genuine. It is recommended to not proceed with the candidate.

SUSPICION FLAGS (4)

HIGH The candidate claimed to have used "DataSphere" to optimize query performance, but this tool is not mentioned in their resume.

HIGH The candidate's answer about "DataSphere" sounded overly polished and used phrases like "mechanical pillars" and "materialized later", which are not typical of natural speech.

HIGH The candidate accepted "DataSphere" as a real tool and provided a detailed explanation of how it works, despite it being a fake tool.

MEDIUM The candidate's answer about DBI was vague and lacked specific details about their experience with that tool.

THE PROBLEM • Why Interview Cheating Is a Real Crisis

Tools like Paareak show AI-generated answers on a hidden overlay during video interviews, triggered by hand gestures — invisible to screen share.

Deserving candidates lose out

Cheating candidates score higher. Real talent gets screened out before ever being heard.

Companies waste 3–6 months salary

Wrong hires burn out or fail on the job.
Average cost of a bad hire = 3–6 months pay.

Hired candidates can't perform

They passed the interview but fail at the role — causing team damage, churn, and lost time.

Our approach: Behavioural analysis only — no software on the candidate machine. Integrity SIGNAL, not a verdict. Like a credit score, not a judge.

STEP 1 · Upload Resume → AI Generates Personalised Question Bank

#01

Copy

Can you explain the difference between AWR and ASH reports in Oracle and how you would use them to troubleshoot a performance issue?

WHY IT MATTERS

Genuine answers reveal understanding of Oracle performance monitoring tools and ability to apply them to real-world scenarios.

RED FLAGS

Overly generic or memorized answers

FOLLOW-UP

"Can you give an example of a time when you used AWR or ASH reports to identify a performance bottleneck?"

STEP 2 • AI-Generated Trap Questions + Start Live Interview

TRAP QUESTION • PRESSURE FOLLOW-UP • START INTERVIEW BUTTON

TRAP medium Achievement Depth

#08 Copy Notes

You claimed to have improved query response time by 65% through range-interval partitioning. Can you provide the baseline metric, the tool used to measure performance, and the single biggest change that contributed to the improvement?

PRESSURE_FOLLOW_UP hard

#09 Copy Notes

Can you think of a scenario where range-interval partitioning might not be the best approach, and what alternative strategies you would consider?

🔦 INTERVIEWER STRATEGY

Pay close attention to specific details and metrics provided by the candidate, and be prepared to drill down into their experiences and achievements. Use follow-up questions to probe for more information and to assess the candidate's ability to think critically and provide creative solutions.

4 trap questions • 0 pressure follow-ups

New Candidate

▶ Start Live Interview

Trap question

Achievement Depth probe — forces candidate to prove their claimed 65% stat with specific evidence.

Pressure follow-up

"Hard" difficulty — tests critical thinking, not just scripted recall.

Start Live Interview

One click launches session with real-time AI scoring active from the first answer.

STEP 3 • Share Candidate Link → Consent → Interview Begins

Candidate link auto-generates — includes video call + consent form + tab-switch monitor.

Candidate sees consent notice + embedded Jitsi call. Interviewer is notified automatically.

Green confirmation appears on interviewer's screen in real time — no manual step needed.

STEP 4 • Final Integrity Report — Two Real Results Side by Side

GENUINE CANDIDATE • 100 / 100 • ✓ PROCEED

INTEGRITY SCORE

100/100

Proceed to Next Round

The candidate's interview answers are consistent with their resume, and there are no major red flags indicating AI-assisted or scripted responses. The candidate's brief greeting does not provide enough information to raise any concerns.

AI ASSESSMENT

The candidate's interview answers are too brief to make a thorough assessment. However, based on the provided information, there is no indication of AI-assisted or scripted responses. The candidate's resume appears to be detailed and consistent with their claimed experience. Further evaluation is needed to fully assess the candidate's qualifications and integrity.

SUSPICIOUS QUOTES

"Hey Ginger, how are you?"

⚠ Not suspicious, just a greeting.

VS

AI-ASSISTED CANDIDATE • 39 / 100 • ✗ DO NOT PROCEED

INTEGRITY SCORE

39/100

Do Not Proceed

The candidate demonstrated a high risk of AI-assisted or coached answers, with significant resume mismatch, scripted language, and lack of specificity. The candidate also accepted a fake tool, 'DataSphere', which is not a real Redshift tool.
